

Mepaco®
an Apache Stainless brand

PUMPING

**Pump - Feeder with
extended Safety Shields**

**Pump - Feeder with
ASME heat transfer
jacket to maintain
product temperature
and CIP (clean-in-
place) system**

Pump-Feeders: Automated Surge, Protected Product. Tailored Performance

Mepaco's Pump Feeder automates product transfers while preserving integrity and optimizing surge capacity. Designed for demanding food processing environments, it converts traditional batching into a continuous, first-in, first-out metered flow—boosting efficiency and consistency.

Surge Capacity

The low-profile hopper enables rapid discharge from upstream equipment like cookers and mixers.

Protecting Product Integrity

Engineered to protect your product.

- Electropolished surfaces reduce adhesion and simplify cleaning.
- Inline pump orientation minimizes smear and heat.
- Load cells and pressure sensors ensure gentle, precise metering.
- Swing-away mounts and quick-release seals simplify maintenance.
- Swing-away pump mounts and quick-release seals offer easy access for cleaning and maintenance.

Customization for Your Process

Built to match your process:

- Single or dual agitators
- Heating or cooling jackets
- Isulation and cladding
- Various cover options
- Vacuum cooling packet
- Vacuum construction
- Variable speed drives and multistep control packages
- Integration with chub packaging systems via the PosiFlo Automatic Chub Feeder
- Variable speed drives
- Basic or full controls packages

**Swing away pump mount with
compression tube access**

**Dual Auger and Electropolished
food contact surfaces**
